WHAT IS SHOCKWAVE THERAPY?
Shockwave therapy is successfully used for the treatment of muscle/tendon tissue and tendon insertions. Shockwaves are high energy sound impulses. The energy released in the treatment area improves the metabolism and blood circulation, thereby stimulating the body’s self healing repair mechanism. Shockwave has many advantages. A few examples are:
- Short treatment time per session
- High percentage of successful treatments after only a few sessions
- Makes medication and/or surgery superfluous
The effectiveness of shockwave therapy is sufficiently proven by scientific research.

WHAT IS THE ENDOPULS 811?
The Endopuls 811 is a compact, and complete shockwave unit. This ideal shockwave therapy device is safe, comfortable and user-friendly, as well as cost-effective and space-saving.

COMPACT
The Endopuls 811 does not need a compressor, as it has an electromagnetic system. The electromagnetic system is small, light and mobile and requires little maintenance. The projectile in the ergonomic handpiece is electromagnetically activated.

MOBILE
The Endopuls 811 is supplied in an aluminium case with all the necessary accessories, such as various applicators and a foot switch. Easy to transport and everything at hand for a complete treatment.

LITTLE MAINTENANCE, LONG LIFETIME
The Endopuls 811 needs very little maintenance. The ergonomic handpiece can be used for at least 2 million shocks (about 1000 treatments) before it needs a revision.

THE IDEAL UNIT FOR RADIAL SHOCKWAVE THERAPY, SUITABLE FOR EVERY PRACTICE

THE ENDOPULS 811, THE COMPLETE UNIT
- The handpiece has an ergonomic design and is made of a heavy quality aluminium. Due to the handpiece’s own weight less pressure is required by the therapist, it gives better intrinsic and vibration cushioning to protect the therapist, and a perfect dosage of energy transfer to the patient.
- Extremely easy to use: operated via the clear touchscreen.
- The energy is set precisely and displayed in mJoules, informing the therapist about the energy transferred to the tissue.
ENDOPULS 811

TECHNICAL SPECIFICATIONS

Dosage / Energy settings: 60 mJ to 180 mJ in steps of 10 and 180 mJ. (at 16 Hz maximum 120 mJ and at 22 Hz maximum 90 mJ).

In comparison with a pressure-driven unit this is 1 / 2 / 3 and 5 Bar.

Save and update: on SD cards

Handpiece: Ergonomic, anodised aluminium housing.

Dimensions device: length 35 cm, width 25 cm, height 14 cm

Dimensions handpiece: length 23 cm, 5 cm diameter

Weight device: appr. 2.7 kg

Weight handpiece: appr. 0.85 kg (with cable)

Service life: minimum of 2,000,000 shots

Applicators: 6 mm, 15 mm and 25 mm diameter, with a minimum life time of 150,000 shots

Electrical connection: 100 – 240 VAC / 50-60Hz 2.5A

Approvals: IEC/EN 60601-1

STANDARD ACCESSORIES ENDOPULS 811

1650800  Hand-piece, complete with a 15 mm applicator
1650808  Holder for hand-piece
1650801  25 mm a applicator
1650802  15 mm applicator
1650803  6 mm applicator
1650804  Silicon covers, 10 pcs
1650805  Endopuls lotion, bottle 250 ml
1650810  Foot switch
1650807  Applicator measurement tool
1650809  Carrier case
1650751  Operating manual
xxxxxxx  Mains cable

OPTIONAL ACCESSORIES ENDOPULS 811

1468960  EN-CAR U3
